

GASKET AND BOLTED JOINT TRAINING

Fluid Sealing Training Course

**Our goal for this in-depth gasket training is the same as yours:
We want to help you confidently sell high-quality products at greater volumes.**

KLINGER Thermoseal's gasket and bolted joint training course includes a comprehensive overview of today's competitive and price-driven marketplace. Topics covered in this course provide thorough details of the complexities of flanged joint assemblies and the function of the gaskets used to safely seal them.

This training offers immediate and relevant knowledge to become a reliable information source. Attendees will leave with an enhanced familiarity of industry standards and gasket terminology to confidently partner with end-users, engineers and decision makers.

Classes are held at our factory headquarters in Sidney, Ohio. We can also customize the course and conduct training on location for your sales team or for your end user customer. Please call for more information.

MEET YOUR INSTRUCTORS:

LONNIE BOLIN
Technical Sales Director

Lonnie has over 30 years of technical sales experience in the gasket industry with both distributors and end users. His familiarity and vast product knowledge will help you create credibility in today's competitive market.

LEVI MOTTER
QA | Lab Manager

Levi brings nearly 25 years' experience performing QA testing in our on-site lab and maintaining best practices for our QMS. He will guide trainees on applications and material evaluations.
