

# KLINGER MILAM PSS

## Storage and Shelf Life

Milam is a soft sealing material with stainless steel reinforcement, suitable for high temperature applications. The following basic conditions for proper storage should be followed in order to achieve a shelf life of ~5 years.

- » Temperature range: ambient temperatures
- » Relative humidity: <40%
- » Clean and dry environment (no airborne dust, no aggressive gases or vapors)
- » Store horizontally (flat) on a shelf/rack
- » Protect to prevent any impact to the materials surface as it is susceptible to scratching/indents. Keep material from coming in contact with any surface that is not clear and/or loose of debris or other elements that could cause damage.

*The ability of a gasket to make and maintain a seal depends not only on the style and quality of the gasket material, but also on medium being sealed, the flange design, the amount of pressure applied to the gasket by the bolts and how the gasket is assembled onto the flanges and tightened. These factors are beyond the manufacturer's control.*
